PROFESSIONAL SUMMARY

Backend and database engineer with 7+ years of software engineering experience (since 2018), most of it building transaction systems for Indonesian financial technology, plus a year in e-commerce. Specialised in C# / .NET Core services, SQL Server and PostgreSQL performance tuning, and high-volume payment processing (PPOB bill payments, closed-loop wallets, EDC/MiniATM terminal backends). Currently re-platforming legacy .NET Framework services — including a transaction switching core — to .NET Core on Linux and Docker.

WORK EXPERIENCE

Software Engineer

Dec 2022 – Present

PT Arranet Indonesia Sejahtera — Jakarta, Indonesia

- Re-platform legacy .NET Framework services — including the company's transaction switching core — to .NET Core on Linux and Docker, with staged cutovers and rollback paths for systems that cannot afford downtime.
- Own the PayAja and BayarBayar payment platforms end to end: transaction APIs, web dashboards, and every escalation that comes through customer service.
- Build and maintain .NET Core backend services processing high-volume financial transactions: PPOB bill payments, bank transfers, and wallet-to-wallet transfers.
- Reduce query latency on PostgreSQL and SQL Server through indexing strategy, table partitioning, and execution-plan tuning for high-volume financial data.
- Built an automated transaction engine that schedules and runs thousands of daily transaction jobs across a network of payment devices.
- Modernised the backend for EDC/MiniATM payment terminals, improving server-side processing speed and transaction security.
- Apply AI-assisted development (Claude Code) in the daily workflow, from implementation to technical documentation.

Software Engineer

Dec 2021 – Nov 2022

Qodyra Technologies — Remote

- Built an e-commerce platform for UMKM sellers (apparel, footwear, and more) using Laravel and MongoDB, integrated with the Xendit payment gateway.
- Optimised query performance and indexing for large-scale product catalogs across PostgreSQL and MongoDB.
- Resolved data-flow bottlenecks between SQL and NoSQL stores, keeping catalog data consistent and reads fast under load.

Software Engineer

Oct 2018 – Nov 2021

PT Arranet Indonesia Sejahtera — Jakarta, Indonesia

- Developed new payment products end to end on Bukopinet, a live PPOB application on ASP.NET Framework: university tuition, telco prepaid/postpaid, and e-money products, from frontend to backend logic.
- Built Bukopinet Mobile with Xamarin, including its REST API, the admin dashboard, and the partner (CA/branch) management web application.
- Built PayAja, a closed-loop wallet used by community networks (schools, pesantren, cooperatives): the transaction API and later the web dashboard; its MiniATM-connected variant became BayarBayar.
- Implemented API security with JWT and OAuth2 for bank and payment partner integrations, documented with Swagger/OpenAPI.
- Worked within an ISO 9001:2015 quality management process where every change is documented.

Berca Hardayaperkasa — Jakarta, Indonesia

- Supported senior engineers in IT operations and troubleshooting, resolving 10+ technical tickets daily.
- Helped maintain 99% uptime for internal infrastructure and streamlined daily reporting, reducing manual documentation time by about 20%.

KEY PROJECTS

PayAja Digital Transaction Platform (2020–2024, live) — closed-loop wallet for community networks (schools, pesantren, cooperatives): PPOB bill payments, bank transfers, and wallet-to-wallet transfers through one integrated service. Built the transaction API and the web dashboard. .NET Core, PostgreSQL.

Bayar-Bayar EDC Backend (2024, active) — modernisation of the backend behind EDC/MiniATM payment terminals: faster server-side processing, tighter transaction security. .NET Core.

Automated Transaction Engine (2025, active) — internal engine scheduling and running thousands of transaction jobs a day across a payment device network. .NET Core, C#, SQL Server.

National Utility Payment Link (2022–2023, live) — maintained the integration handling national electricity payments with a focus on reliability and uptime. .NET Framework.

EDUCATION

Bachelor of Computer Science 2015 – 2018
University of Indonesia — Depok, Indonesia

Associate Degree (D3), Information Technology 2011 – 2014
Telkom University — Bandung, Indonesia

TECHNICAL SKILLS

Backend: C#, .NET Core, ASP.NET Core, .NET Framework, Web API, Entity Framework Core, LINQ, MVC, WCF, Xamarin, REST API design, background jobs and scheduling

Databases: SQL Server, T-SQL, stored procedures, indexing, query optimization, execution plans, PostgreSQL, PL/pgSQL, partitioning, MongoDB, SQL/NoSQL data consistency

Payments domain: payment gateway integration (banks, aggregators, Xendit), PPOB billing systems, closed-loop wallets, EDC/MiniATM terminal backends, reconciliation and data integrity, high-volume transaction processing

Tooling and process: Docker, Linux, legacy re-platforming, AI-assisted development (Claude Code), Swagger/OpenAPI, Git, Azure DevOps, Trello, ISO 9001:2015 workflow, technical documentation and PRDs

Web: HTML, CSS, JavaScript (ES6+), Bootstrap, Laravel/PHP

LANGUAGES

Indonesian (native) | English (professional working proficiency)

ADDITIONAL INFORMATION

Mentoring junior developers; re-platforming legacy systems to containerized environments. Outside work: coffee chemistry and precision brewing (French press).
